Firefox 1.5.07

Mac

Internet Explorer for Mac 5.2
Safari

What is a cookie?

Cookies are small pieces of information, sent from the server, to be stored in a file on your computer. Cookies can be used for many purposes, but at our site, a cookie is used to store security information needed to maintain a secure, confidential connection to our Internet server.

Enhanced Authentication remembers your computer by assigning a unique identifier (cookie) to each computer you use to access the system by using standard cookies. The cookie is used to store the identification information only. No personal or private data is stored.
